Appendix D-Budget Target information 31

Scheme Background

For 2026/27, the historic place approaches have been **reviewed, aligned, and harmonised** to create this **single South Yorkshire ICB Medicines Optimisation Quality Improvement/Incentive Scheme.** This approach supports:

•Reduction in unwarranted variation across South Yorkshire

•Improved equity of access and quality outcomes for patients by recognising that medicines are an investment

•Maximising system-wide financial efficiency

•Streamlining engagement with practices

The scheme places emphasis on efficiency savings alongside an ongoing focus on quality improvement, patient safety, and cost-effective prescribing. This reflects the significant financial challenges across the NHS and need to make best use of our

resources. It also allows the system to invest in new medicines and treat more patients in turn helping to improve patient care and outcomes

Aims of the Scheme

The scheme aims to:

- Improve patient care and outcomes through safe, cost effective and clinically effective prescribing
- Reduce variation across South Yorkshire
- Support high-quality, evidence-based prescribing
- Strengthen clinical leadership within general practice and practice engagement with the ICB
- Secure longer term predictable investment into GP practices

Scheme Design Principles

The scheme has been developed collaboratively by the South Yorkshire Medicines Optimisation (SY MO) team based on the following principles:

- **Harmonisation** – one consistent scheme across South Yorkshire
- **Clinical focus** – delivering improved patient outcomes in line with SYICB strategy & national policy
- **Financial sustainability** – prioritising areas with highest measurable efficiencies
- **Deliverability** – aligned to existing workflows and the new model of MO strategic operation from 2026
- **Move away from annual cycles of investment**

The scheme **complements local and/or national contractual** requirements (e.g. place quality incentive schemes, QOF, PCN DES, IIF), and if overlap exists, additional requirements have been included to maximise impact.

Financial

The 3-year scheme is designed to support delivery whilst ensuring value for money supporting reinvestment in the treatment of new medicines

- Total payments are capped at **£1.57** per registered patient based on February 2026 list size, with an inflation linked uplift based on September figures each year
- The total initial investment will be £2,403,540
- Payments will be proportional to work completed against agreed targets for included metrics
- It is proposed that this will be a recurrent investment of the next 3 years, with the metrics/priorities amending each year. Over the schemes lifetime this

represents approximately £7.43m of secured investment into GP practices. For an example 10,000 patient practice this equates to around £48,500 of investment or around £100k for the largest practices in SY. At least 32% (£15.5k - £31k) will be paid to practices for signing up to the scheme and committing to engaging with the aims within the scheme. Appendix B summarises minimum and max payments per practice.

Timeline

The scheme will be operational from the **14th of July 2026** to the **31st of March 2029** with an annual review of the priorities and programmes of work to be included.

Scheme Structure

The 2026/29 scheme consists of three components worth a % of the total scheme pot. The work within each component and its measures will be reviewed and updated for each year of the scheme operation, with partner engagement and negotiation

For the first year the 3 components are as follows:

A. Financial Performance (10% = £240,354 = £0.157 per patient)

The aim is to maintain and increase awareness of the relationship between practice prescribing spend and performance against the target budget

- Where practices are within their indicative practice budget, they will be eligible to an annual payment of **£0.157** per patient

Or

- Where practices are less than or equal to 1% above their indicative practice budget, **OR** a **3%** reduction in your 25/26 overspend (25/26 expenditure compared to 26/27 expenditure) they will be eligible to an annual payment of **£0.079 (5%)** per patient

See Appendix D for budget target information

B. Core (Gateway) Work (32% = £769,132 = £0.502 per patient)

The 32% assigned to this section is an **upfront payment each year and** will be made on sign-up to enable practices to obtain additional staffing capacity to plan and undertake work, these payments are inclusive and NOT additional to the total practice reward against the scheme, although this metric has **no specific measures (excluding Point of Prescribing system)** practices' engagement and evidence of activities undertaken in line with the below will be considered by the ICB. If practices are struggling to access

information to support implementation of the scheme, they should contact the SY MO generic email address at syicb-sheffield.syicb.medsopt1@nhs.net for support.

Practices are expected to deliver work across all core workstreams unless otherwise agreed.

Participating practices will:

- Sign up to the three-year scheme by the 27th of July 2026 see link
- Nominate a *Medicines Optimisation (MO) Clinical Champion (e.g PCN Pharmacist/Lead Pharmacist/GP) who will:*

- *Lead delivery of prescribing improvement activity within the practice*
- *Act as the main point of contact with the MO team*
- *Attend two meetings for one hour on Microsoft teams with the MO team*
- *Cascade prescribing guidance and learning within the practice, this could be part of the regular practice meeting*
- *Support implementation of system priorities e.g. consider hosting Foundation Trainee Pharmacists within general practice if deemed appropriate, please note this is not mandatory please complete Appendix C*
- *Demonstrate implementation and use of a local communication arrangement with local pharmacies to efficiently manage alternative prescription requests due to medicines supply issues*
- *Promote use of point of prescribing (POP) software within the practice*
- *Support antimicrobial stewardship and waste reduction initiatives*

This role is a key enabler of scheme delivery and clinical engagement.

C. Quality and Efficiency Core Areas (58% = £1,394,053 = £0.911 per patient)

This involves the delivery of several priority medicines optimisation workstreams across all SY practices against set targets. The programme is designed to deliver measurable clinical benefit and recurrent financial efficiencies

If practices are struggling to access information to support implementation of the scheme, they should contact the SY MO generic email address at syicb-sheffield.syicb.medsopt1@nhs.net for support

Areas include:

- Respiratory optimisation: beclometasone/formoterol pMDI inhaler review and SABA reduction
- QIPP Reviews
- Cardiometabolic optimisation: Review of SGLT2 Inhibitor Prescribing
- Diabetes optimisation: Review of DPP-4 Inhibitor Prescribing

- Opioid reduction in chronic pain
- Antimicrobial stewardship
- National Community Pharmacy Contraception Service

These areas have been selected due to their:

- Significant quality and financial opportunity across all SY practices
- High clinical impact improving patient care and outcomes, whilst reducing health inequalities across SY
- Alignment with national, regional, and local priorities

The metrics detailed in Appendix A support national, regional and local priorities, practices will have undertaken work in some of these areas previously but continued focus and optimisation is needed to improve patient care, safety and outcomes and optimise the use of the primary care workforce.

Termination and Review

Either Party may terminate this scheme by giving not less than three (3) months' written notice to the other Party.
The Parties acknowledge that this scheme may require amendment or cessation in response to changes in national policy, commissioning intentions, funding arrangements, or local service requirements. Where practicable, the Parties will discuss and seek to agree any necessary amendments before exercising this termination provision.
Termination will not affect any commitments or obligations that have accrued prior to the date of termination.

Payments to Practices

Payments will be approved centrally by the ICB governance process, and will be made following validation of achievement by the Medicines Optimisation Team and the Finance Team

EQIA (Quality Impact Assessment)

An EQIA has been completed prior to implementation

The scheme supports:

- Reduction in medicines-related inequalities
- Improved access to safe, cost effective and clinically effective treatment for patient across SY

Monitoring and Reporting

- Practices will have access to a performance dashboard hosted on the InSYghts Primary Care InSYghts Portal
- Data will be sourced from EPACT, PrescQIPP, point of prescribing systems and Open Prescribing
- The frequency of reporting will occur monthly

Resources

Resources to support the scheme can be found here

Clinical System searches have been set up to support the following metrics

- QIPP Reviews
- SABA reduction
- Contraception Service

Appendix A-SY Medicine Optimisation Quality Improvement/Incentive Scheme Areas 2026/27

Please note any action sheets/SOPs that have been listed as a resource were developed for the MO delivery team and have not been adapted for other pharmacy professional roles

Workstream	Description of work	Target	Resources (e.g. accompanying searches, links to national, regional of SY guidelines, existing action sheet/SOP) Resources to support the scheme can be found here	Scheme Area	Payment Total payments are capped at £1.57 per registered patient based on February 2026 list size A:10% B:32% C:58%
Financial	The aim is to maintain/create awareness of / link with practice prescribing spend and performance against target budget	• Where practices are within their indicative practice budget, they will be eligible to an annual payment of **£0.157** per patient **OR** • Where practices are less than or equal to 1% above their	Efficiency metrics discussed within the scheme will support achievement as will other work identified internally by practices	A	10% £0.157 per patient

		indicative practice budget, OR a **3%** reduction in your 25/26 overspend (25/26 expenditure compared to 26/27 expenditure) they will be eligible to an annual payment of **£0.0785(5%)** per patient			
Point of Prescribing (POP) Support Software	Implementation and consistent use of OptimiseRx across all GP practices to support safe, evidence-based, and cost-effective prescribing at the point of care.	OptimiseRx to be fully implemented and actively used by all prescribers, including locums, with remote access enabled where applicable. Achieve **≥30% acceptance rate** for cost effective recommendations Achievement measured at Quarter 4 26/27 Whilst not a formal performance target, it is expected that practices give due consideration to best practice recommendations,	Prescribers Guide: TPP SystmOne Prescribers Guide: EMIS Web link to SY MO website	B	32% upfront payment/£0.502/pp for all of section B The POP forms part of section B

		ensuring that prompts are not routinely dismissed without appropriate clinical rationale. Data Source: OptimiseRx			
CARDIOMETABOLIC OPTIMISATION WORKSTREAM					
Cardiometabolic Optimisation	Flozin (SGLT2i) Review	Review patients in line with the SY ICB Position Statement on preference of SGLT-2 inhibitors and where a flozin is clinically indicated patients are prescribed the most cost- effective clinically appropriate flozin* *Generic dapagliflozin is the first line cost-effective flozin in South Yorkshire. **Target:** The percentage of generic dapagliflozin from all flozins including combination products ≥ 76.95% (achievement measured in quarter 4 26/27) Data Source: ePACT2	SY ICB Position Statement on preference of SGLT-2 inhibitors	C	10% £0.157/pp

DIABETES OPTIMISATION WORKSTREAM					
Diabetes Optimisation	Gliptin Review	Review patients who are prescribed DPP-4 inhibitor (gliptins) to establish if the gliptin remains clinically indicated in line with local and national guidance (NG28), and de-prescribing /alternative therapy considered clinically appropriate. AND Where a gliptin is clinically indicated patients are prescribed the most cost-effective clinically appropriate gliptin* in line with the place formulary or South Yorkshire IMOC position statement. *Generic sitagliptin is the first line cost effective gliptin in South Yorkshire. Linagliptin is the second line gliptin to be used only after sitagliptin has been tried, or if eGFR < 45ml/min/1.73m^2 **Target:**	SY ICB Position Statement: DPP-4 inhibitors ('gliptins') in the management of Type 2 Diabetes	C	5% £0.0785/pp

		The percentage of sitagliptin from all gliptin and gliptin/metformin combination products is **≥ 62.17**% (achievement measured in quarter 4 26/27) or an increase of **11.35%** percentage points from the baseline (Quarter 4 25/26 compared to Quarter 4 26/27) Data Source: ePACT2			
RESPIRATORY OPTIMISATION WORKSTREAMS					
Respiratory Optimisation	Asthma Review	Practices to review patients on Fostair pMDI or generic equivalent, in line with the NHS South Yorkshire ICB Position Statement - Prescribing of Beclometasone/Formoterol Combination pMDIs and the South Yorkshire Adult Asthma Guideline 2026, Where a	System searches Prescribing of Beclometasone/Formoterol Combination pMDIs South Yorkshire Adult Asthma Guideline 2026	C	15% £0.235/pp

		beclometasone/formoterol pMDI inhaler is still clinically indicated, patients are prescribed the most cost effective clinically appropriate brand in line with the South Yorkshire formulary. (i.e.Proxor pMDI) Please note: Luforbec to be accepted as formulary in order not to penalise recent QIPP work done across places **Target:** The percentage of Proxor or Luforbec against all beclometasone/formoterol pMDI combination inhaler prescribing is ≥ 80% (achievement measured at Q4 26/27) or the practice will show movement towards this by ≥ 55 percentage points (Q4 25/26 compared to Q4 26/27) Data Source: epact 2 data			

Respiratory Optimisation	**Short Acting Beta Agonist (SABA) reduction**	The practice will review patients aged 5 and above with diagnosis of asthma and who are not on an optimal maintenance asthma therapy. This work aims to implement CYP and Adult asthma guidelines, reduce SABA overreliance, and optimise compliance **Target:** The percentage of patients with asthma (no COPD), aged 5 years and over, using 4+ SABA in 9 months ≤ 10% (achievement measured in March 2027) or reduce by 7.5% percentage points (March 2026 compared to March 2027) Data Source: clinical systems	System searches SABA Over-reliance in Asthma – What is it and how can we help reduce it? SUPPORTING PATIENT ACCESS AND GP CAPACITY					

National Community Pharmacy Contraceptive Service	Promotion of the Community Pharmacy Contraception Service (PCS). The aim of the PCS is to widen access to contraception services by enabling community pharmacies to initiate and supply oral contraception and emergency contraception, thereby offering patients more choice in where they receive care. It also aims to create additional capacity in primary care and sexual health clinics (or equivalent) to support meeting the demand for more complex assessments. Increased promotion of the service by practices will give patients greater	**Target**: 85% of patients prescribed an oral contraceptive to have been informed about the Community Pharmacy Contraception Service by end of March 2027. Clinical system searches will identify patients prescribed repeat oral contraception who meet eligibility requirements for the PCS who have a record in their notes of being informed about the PCS via the SNOMED code: Signposting to Community Pharmacy Contraception Service (2140271000000102), recorded in the past 24 months. This search will be run for end March 2026 to provide a baseline for practices and identify patients who could be informed about PCS to help the practice achieve the target. **Work to be done by practices:**	Local guide: PCS Toolkit Local contraception formulary (all providers being encouraged to adhere to):SY ICB Medicines Optimisation National Resources: Community Pharmacy England Website. **Template SMS/AccuRx wording**: Did you know that if you use oral contraception (for contraceptive purposes only) you can get your supply from your local community pharmacy without contacting your GP? To find out more about the service and nearest pharmacy please visit https://www.nhs.uk/nhs-services/pharmacies/f	C	3% £0.0471/pp

	choice in when and where they can access appointments whilst freeing up clinician time within general practice to manage more complex patients and reduce practice workload associated with repeat prescription management. **Rationale** Promotion of the PCS supports the NHS ambition to expand clinical services delivered through community pharmacy and reduce pressure on general practice, while improving patient access to contraception. If GPs actively promote eligible patients to pharmacies, GPs can help patients	Once patients are identified who require informing about PCS plan how patient's will be informed e.g. - SMS message (see template wording under resources) - At each patient interaction about contraception e.g. during a consultation with a clinician or at triage when requesting an appointment for oral contraception. When a patient has been informed of the service record this in their record using the SNOMED code: Signposting to Community Pharmacy Contraception Service (2140271000000102), The clinical system searches will be run monthly to help practices track their compliance with the target via the incentive scheme dashboard.	ind-a-pharmacy-offering-contraceptive-pill-without-prescription/ To find out about all different methods of contraception please visit https://www.nhs.uk/contraception/methods-of-contraception/		

	benefit from faster, more convenient access, reduced delays, and greater choice of care location—especially for younger people, rural and underserved communities, and those struggling to secure GP appointments. This can also free up GP appointment slots and reduce repeat prescription workload. Improved pharmacy access may enhance adherence, reduce gaps in use, and support reproductive autonomy, ultimately helping to lower unintended pregnancy rates and the associated costs to our system as well as the emotional impact on individuals	NB: if a practice has already undertaken work to promote PCS to their patients e.g. using AccuRx but has not been recording it in the clinical record they could consider re-promotion or reviewing who has already been contacted and retrospectively record this on their record with the date of promotion. **Top tips:** - Before planning your promotion activities have a chat with your local pharmacies so they are aware you a planning to promote the service and so your team has a good understanding of how the service is running at your local pharmacies. NB please be mindful if you've identified a large number of patients and plan to send SMS messages consider staggering			

	faced with an unintended pregnancy.	when you send these over the next few months. - Make every contact count – ensure all staff involved in triage and clinicians providing contraception consultations are encouraged to promote the service and know how to code promotion in the patient record. - If your practice achieves the 85% target before the end of March 2027 keep an eye on the incentive scheme dashboard to ensure any new patients have also been informed about the service so you maintain on target at the end of March 2027. **Data Source: Clinical Systems**			

		NB: Patients prescribed OC for **non-contraceptive** indications need to continue to receive their prescriptions via general practice.
